Fig. 2B-4 (Prior Art)

IgG (Y) is patterned
by stamping

Remainder of
surface is blocked
with BSA (□)

Fig. 2C-3
(Prior Art)

Fluorophore-
labeled antigen
is introduced

(Prior Art)

PDMS is peeled away
from the master

Fig. 2E-2
(Prior Art)

PDMS is exposed to a
Solution containing
 $\text{HS}(\text{CH}_2)_{15}\text{CH}_3$

Fig. 2E-3
(Prior Art)

Stamping onto gold
substrate transfers
thiol

Fig. 2E-4
(Prior Art)

Surface is exposed to
Solution containing
 $\text{HS}(\text{CH}_2)_{11}\text{OH}$
